

Viper[®]-ST

Solid Dielectric, Independent Pole Operated Recloser Providing overcurrent protection for single or three-phase operation

Recloser Innovation Leader

As the North American leader in reclosers, G&W Electric offers the broadest line of medium-voltage reclosers. Backed by more than 115 years of experience, the Viper-ST recloser incorporates the latest technology to deliver reliable, maintenance-free overcurrent protection for power systems up to 40.5kV. It is available in various pole-mounted configurations, as well as substation and pad-mounted options, to accommodate a wide range of applications.

Viper-ST Overview

Viper-ST Recloser combines the time proven reliability of the electronically controlled, vacuum fault interrupters with the maintenance-free benefits of a solid dielectric insulated device. The recloser offers user flexibility with voltages ratings from 15.5kV to 40.5kV with three distinct mechanical operating modes.

- 1-phase trip / single-phase lockout
- 1-phase trip / three-phase lockout
- 3-phase trip / three-phase lockout

Isometric view of the Viper-ST Recloser without insulators.

BENEFITS

Reliable Performance

- Utilizes time-proven epoxy to fully
 encapsulate the vacuum interrupter
- Offers excellent insulation while providing fully shielded construction
- All modules are UV protected and 100% factory tested for partial discharge
- Utilizes the latest in magnetic actuator technology
- Interrupter and actuator assembly tested for over 10,000 mechanical operations to ensure a long operating life

Operator Safety

- Vacuum interrupter and all energized parts are sealed within solid dielectric insulation
- Installation flexibility with L-shaped and Z-shaped module designs
- Module bodies are fully grounded to provide a dead-front construction, providing optimum operator safety and additional protection to wildlife
- The hot stick operable manual trip and lockout handle prohibits operation from either the control or remotely
- Manual trip handle with true mechanical blocking further ensures against accidental close operations
- Open and closed contact indicator verifies contact position
- Contact status and lockout condition can also be verified at the control

Application Flexibility

G&W Electric provides a consultative approach to your recloser design. Our engineers will provide you a design that meets your specific needs. Customized control cabinets, recloser frames and category 4 hurricane proof designs are some of the options available to our customers.

- Units are designed for overhead, substation and padmount applications
- Pole mounted units can be equipped with either one horizontal and vertical insulator or both horizontal insulators
- Designed with IEEE 386 interface apparatus bushings permitting the use of either long lasting silicone insulators for overhead applications or elbow connectors for padmount or riser for both padmount and riser pole applications
- Removable silicone insulators are standard for overhead applications, providing easy field replacement if an insulator is damaged
- Higher external BIL rated insulators can also be used in high pollution areas and can be retrofitted on-site if necessary

Maintenance Free

- Solid dielectric insulation provides maintenance-free installation
- Electronic equipment associated with the operation of the magnetic actuator(s) are located in the control

Ease of Operation

- Compatible with the SEL-651R, Beckwith M-7679 and ABB RER620
- Site-ready options available

As the leading supplier of reclosers, we set the standard for innovation, reliability, and versatility. Our advanced recloser solutions are designed to meet the evolving needs of power systems, offering unmatched performance across a wide range of applications. From distribution networks to renewable energy integration, our reclosers deliver precise protection and control at every level. With the widest range of voltage offerings in the industry, we provide tailored solutions that empower our customers to enhance grid resilience, optimize efficiency, and adapt to future challenges with confidence. Partner with us for cutting-edge technology and unparalleled expertise in recloser solutions. 27kV Viper-ST recloser with center mount frame.

Viper-ST Operation Principle

The Viper-ST Recloser monitors the circuit using internal dual-ratio current transformers (CT) and voltage sensors. The unit is powered by an external 120 VAC or 48/125 VDC source with energy to operate the recloser mechanism coming directly from the control.

Solid Dielectric Modules

The Viper-ST modules are manufactured with an IEEE 386 apparatus bushing interface. Removable silicone insulators are standard for all overhead applications. If higher external BIL ratings are required due to high altitude or local environmental conditions, such as coastal environments, higher rated insulators can be provided initially or retrofitted in the field by personnel. For dead-front, padmounted applications, 600A apparatus bushings or 200A deep well bushings (up to 27kV) are available.

Silicone insulators are removable permitting easy replacement in the field if damaged or if higher external BIL level is required.

Integrated Current and Voltage

- A 1000/500:1 dual-ratio current transformer is encapsulated within each module. An optional 400/200:1 dual-ratio CT is also available for lower current detection.
- CT accuracy is +/-1%.
- Low Energy Analog (LEA) capacitive voltage sensors are encapsulated within each module. The accuracy +/-2% over the temperature range -20°C (-4°F) through +40°C (104°F) and +/-4% from -60°C (-76°F) through +65°C (149°F). The voltage sensing phase angle accuracy is +/-1° throughout the full temperature range.

Accusense® Voltage Sensors

Accusense Voltage Sensors are a metering-class voltage sensing solution that enables users to collect critical voltage data needed for monitoring and optimizing grid power. Accusense voltage sensing technology eliminates the need for metering with traditional voltage transformers and is available as a site-ready solution with the Viper-ST Recloser.

Accusense voltage sensors have been tested to IEC 60044-7:1999 standard and comply with 0.5 accuracy class ($\pm 0.5\%$ Magnitude, $\pm 0.344^\circ$ Phase). They are rated to operate up to 38kV voltages, 225kV BIL, -40°C to + 65°C temperature range, and do not require ratio correction factors.

Manual Trip Operation

- The hookstick manual trip handle trips and locks out the selected phase, or all three phases according to the control settings, disabling any local or remote closing operation until the handle is reset
- · Once reset, the recloser can be closed using the control
- Contact position indicator displays open or closed status of the contacts for each phase, individual phase status is also displayed at the control
- · Handle is operable from ground level

Dead-Line Operation

- Unique design of magnetic actuator system provides for local and remote operation if the AC source power is lost or interrupted
- Dead-line operation allows the recloser to operate utlizing the DC power from the battery located in the control

Closed position

Viper-ST Recloser Configurations

Polemount Center Bracket (15kV shown)*

- · Aluminim centermount frames are standard. Galvanized and stainless steel options are also available.
- Frames can be designed to incorporate site-ready accessories, such as potential transformers and lightning arresters.

15kV center polemount Viper-ST recloser

Alley-Arm Frame (15kV shown)*

- · Outline is a full site-ready package with two oil control power transformers
- Alley-Arm frame is galvanized
- · Mounting bracket can be mounted on either side to match overhead lines
- · Bracket position can be changed on-site without the need for special tools

*Dimensions are approximate. Do not use for construction. Brackets are aluminum as standard. Note: 38kV and 40.5kV frames have a minimum of 17" spacing.

Cross-Arm Frame (15kV shown)*

- · Phase B can be moved on site, without special tools, to either side of the pole to match the overhead line configuration
- Shown as a site-ready unit
- · Stainless steel options available

Polemount Cluster Bracket (15kV shown)*

Horizontal Insulator Bracket (38kV shown)*

- Ideal for overhead applications where all three phase conductors are on the same side of the pole or for congested installations with minimal phase spacing
- · Stainless steel option is available

Riser Pole

• Dead-front design allows for riser pole installations that can be simplified with directly connected IEEE386 dead break connectors on the horizontal bushing.

Polemount Site-Ready Assembly (15kV shown)*

- Preassembly of all accessories reduces recloser installation time in the field and may include potential transformers, arresters, aerial lugs, terminal/junction boxes, wildlife protectors, and all associated wiring. Control cables are assembled with connectors on both ends for a cleaner installation. User identification markers can be applied to each unit prior to shipment further reducing installation time.
- Typically paired with SEL-651R2 control. Other controls available.
- · Galvanized steel frames are standard and stainless steel frames optional.

Substation Mount Recloser*

- · Adjustable frame height
- · Photo and drawings below show a three-phase mounted unit
- Aluminum recloser frame on galvanized substation mounting structure is standard. Stainless steel options are available.

Viper-ST Recloserwith one set of external CTs. A second set of CTs can be provided on the other side.

Viper-ST Recloser with Accusense (27kV shown)*

· Centermount or cross-arm frames with factory-installed Accusense voltage sensors and lightning arresters

4/ (1200mm

- · Additional site-ready options are available, such as potential transformers for control power
- · Galvanized and stainless steel options are available

Padmount Applications

For applications where space is limited at the substation, fenceless substations, or where underground feeders require protection, Viper-ST solid dielectric reclosers can provide an ideal solution using a dead-front padmount design.

- 100% dead-front construction that eliminates the need for a transition compartment from live-front terminations to dead-front and removes the necessity for insulating dielectric barriers.
- Can be used as a breaker or as a tie-switch
- Cable connections can be provided with either a standard IEEE 600A apparatus or 200A deepwell interface for elbow connectors
- Controls can be mounted inside the recloser enclosure or within a separate adjacent low voltage enclosure
- Up to six internal LEA voltage sensors can be provided with Z-shaped (front/ back access) or C-shaped (front only access) modules, perfect for tie points on FLISR schemes and automatic transfer applications
- Galvanized steel enclosure standard. Stainless steel options are available.

Module Configurations

Viper-ST Recloser Applications

Reclosers play a critical role in improving distribution reliability. By applying Viper-ST reclosers on the distribution system, permanent faults can be isolated to minimize outage areas and temporary faults can be cleared to restore power, thereby improving service continuity and system reliability.

The Viper-ST recloser can be used in a variety of applications including stand-alone reclosers, complex loop schemes with sectionalizing and tie switches, replacements for circuit breakers for feeder protection, and distributed generation intertie switches. The Viper-ST recloser is a versatile solution for your overcurrent protection and distribution automation needs.

High accuracy Accusense[®] voltage sensors integrated with the Viper-ST recloser can be used as a tool to assist in improving power optimization initiatives such as volt-var optimization (VVO), conservation voltage reduction (CVR), and end-of-line metering. The Viper-ST recloser solution with Accusense voltage sensors can serve as a metering point to provide data required for power factor adjustments, reducing voltages, optimizing voltages, and managing peak loads. External CTs can be installed over the Viper-ST recloser insulators for applications requiring high accuracy current measurement.

Stand-Alone Recloser Application

Temporary Fault Between Viper-ST Recloser and Load

G&W Electric takes a consultative approach to recloser design to develop solutions tailored to the customer's specific needs. Our engineers deliver customized designs, whether specialized cabinets, space-saving frame configurations, or Category 4 hurricane-resistant structures are required.

LOAD

1. A tree branch falls on the line causing a fault between the Viper ST recloser and the Load

2. The Viper-ST recloser begins the reclosing sequence and trips open, as shown in Figure 1

3. The tree branch has fallen from the line and the temporary fault clears

4. The Viper-ST recloser closes and restores power to the load, as shown in Figure 2

Figure 2: Stand-Alone Viper-ST Recloser restores power after temporary fault cleared

VIPER-ST

RECLOSER

Main-Tie-Main Application

SOURCE

Any fault or loss of source can be handled by closing the open tie point to supply power to the loads.

Power is restored

Automatic Transfer

For critical load applications such as hospitals, processing plants, military bases and others, automatic transfer schemes are common. For overhead systems, this scheme requires two switches, voltage sensors, current transformers, and a voltage-time controller. A loss of voltage on the primary source is sensed and initiates the control to open the primary source and close the alternate source recloser to automatically restore power.

Automatic Source Transfer Application – Single Line Example

For additional automation information, refer to our LaZer® Power Grid Automation brochure on our website.

Lazer® Automation Solutions

G&W Electric's LaZer power grid automation solutions offer a comprehensive range of pre-engineered systems designed to meet your specific application needs. These solutions feature custom programming, system testing, and upgradeable options, with scalable distributed or centralized architectures for monitoring and control—including FLISR—all managed through a single point of contact.

Whether integrating new or existing components such as reclosers, switches, radios, SCADA systems, GIS imports, and controls, LaZer ensures a seamless transition from manual to semi-automated or fully automated operations. G&W Electric also provides vendor-agnostic integration of relays and communication equipment. To ensure reliability, factory acceptance testing (FAT) is conducted on all systems, reducing on-site start-up time and guaranteeing performance under any conditions.

Proven Solutions for Every Industry

G&W Electric is a global leader in power grid distribution and transmission. Our expansive suite of innovative products includes:

- Padmount Switches
- Submersible Underground Vault Switches
- Vault and Padmounted Gas and Solid Dielectric Switchgear
- · High Voltage and Medium Voltage Reclosers
- · Sectionalizer and Load Break Switches
- Current Limiting Sectionalizing System
 Protection for MV and LV Applications

- Sensors for Advanced Applications in System Efficiency (CVR and Volt/VAR) and Power Quality
- Power Grid Automation Solutions
- Distribution and Transmission Cable Accessories

G&W Electric engineers flexible solutions for applications in the utility, industrial and commercial sectors.

Contact us today 1+708.388.5010 or info@gwelectric.com

Since 1905, G&W Electric has been a leading provider of innovative power grid solutions including the latest in load and fault interrupting switches; reclosers; sensors; system protection equipment; power grid automation; transmission and distribution cable terminations; and joints and other cable accessories. G&W Electric is headquartered in Bolingbrook, Illinois, U.S.A., with manufacturing facilities and sales support in more than 100 countries, including Canada, Italy, China, Mexico, Brazil, India and Singapore. We help our customers meet their challenges and gain a competitive edge through a suite of advanced products and technical services.
